

Environmental policy statement

Helios Towers' (HT) principal business is the provision of tower space and power services to the mobile network operating community across the markets in which we operate.

Our colocation model, concentrating up to six operators' equipment onto one of our towers, delivers environmental benefits compared with the traditional operator-owned model, which typically has minimal infrastructure sharing. It requires only one generator or power supply, not multiple duplications and emissions. It also means reduced maintenance visits, saving thousands of road kilometres a month – while also reducing associated safety risks.

However, our operations impact and are impacted by the natural environment. Our Sustainable Business Strategy identifies key environmental priorities that our businesses must address and is our framework for setting objectives. We are committed to reducing our fuel consumption, energy use and greenhouse gas emissions, as well as reducing waste and e-waste, and minimising any negative impacts our operations may have on the environment. In November 2021, Helios Towers launched its Carbon Reduction Roadmap with an intensity reduction target and set an ambition to reach net zero carbon emissions by 2040.

Environmental impacts

We will work closely with our people, partners, suppliers and customers to protect the environment by:

- complying with our environmental management system (EMS) ISO 14001: 2015 standard requirements and any regulatory obligations regarding our environmental impacts
- providing employees and other partners with the resources they need to fulfil EMS compliance requirements, commensurate with their roles
- addressing climate change mitigation and adaptation
- improving our energy efficiency and reducing our greenhouse gas emissions
- reducing the effects of noise, pollution and air quality
- protecting biodiversity and ecosystems
- minimising waste generated from our operations and increasing material recovery for re-use and recycling
- safely disposing of any substance or material that may cause harm to the environment
- ensuring that the environment is considered in sourcing and providing goods and services.

Continual improvement

We are committed to engaging with stakeholders to ensure we improve our EMS to deliver environmental and energy best practice. We will communicate this policy to our employees, partners and suppliers and review it on an annual basis. We are also committed to improving our environmental performance and reporting on our progress.

In addressing these environmental impacts, HT and its operating companies are expected to achieve and maintain ISO 14001: 2015 accreditation and become industry leaders in the countries of operation for maintaining high environmental standards. We will also encourage our key maintenance partners to achieve and maintain these standards.

The management is fully committed to achieving a high standard of environmental management and the implementation of this policy. Responsibility for meeting these commitments is shared by all employees. All employees are required to comply with this policy and any other measures the company uses to manage the environmental impact of HT's operations.
